EXPERIMENT 1
Form Creation in Zoho Creator

1. Aim

To create a simple student information form using the Zoho Creator platform for collecting and managing student data, and to understand the basic process of designing a form using different fields and input components.

2. Introduction

Zoho Creator is a low-code application development platform used to build customized applications with minimal programming. It provides a visual form builder in which fields can be added, configured, and arranged to collect structured information. The submitted data can then be stored and managed within the application.

3. Objectives of the Study

- To understand the basic process of creating a form using Zoho Creator.
- To learn how to add and configure different fields in a form.
- To understand how a form is used to collect and store structured data.
- To configure simple validation and mandatory fields.
- To create and preview a functional student information form.

4. Procedure

1. Log in to the Zoho Creator platform.
2. Create or open the required application.
3. Create a new form using the Form Builder.
4. Add simple fields such as Student Name, Register Number, Department, Email, Phone Number, Date of Birth, and Gender.
5. Choose suitable field types such as Name, Number, Dropdown, Email, Phone, Date, and Radio.
6. Mark essential fields as mandatory and configure the field properties.
7. Arrange the fields in a clear and simple order.
8. Save and preview the form to verify the layout and input fields.
9. Enter sample student information and verify that the data can be submitted and stored.

5. Illustrative Example

A Student Management System can use a Student Profile form to collect basic student details. The form is kept simple so that the information can be entered quickly and stored in a structured manner.

5.1 Implementation using Zoho Creator

- **Student Name** – Name field for entering the student's first and last name.
- **Register Number** – Number field for the student's register number.
- **Department** – Dropdown field for selecting the department.
- **Email** – Email field for storing the student's email address.
- **Phone Number** – Phone field for contact information.
- **Date of Birth** – Date field for recording the student's date of birth.
- **Gender** – Radio field for selecting the appropriate option.

5.2 Form Design

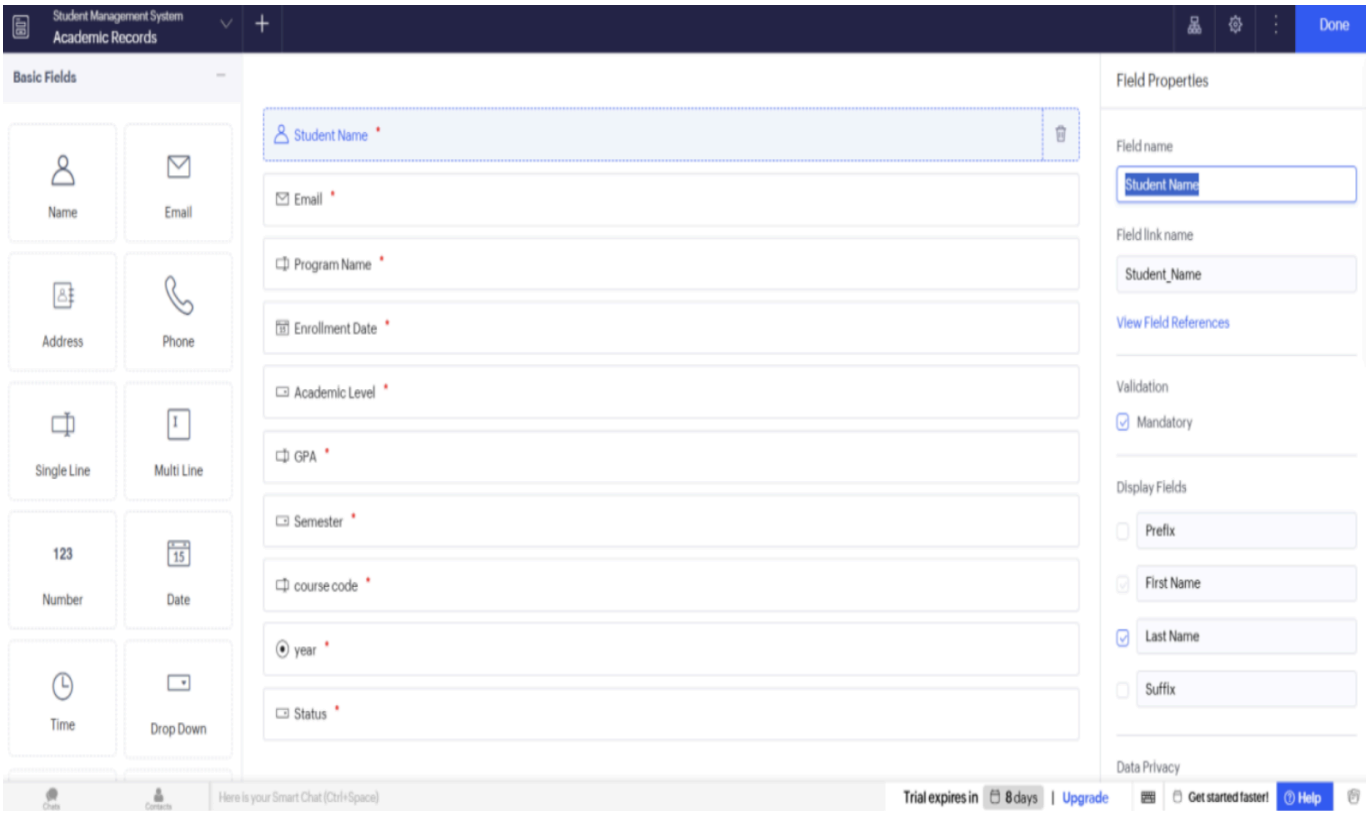

Figure 1: Zoho Creator Form Builder showing the configured fields.

5.3 Form Preview

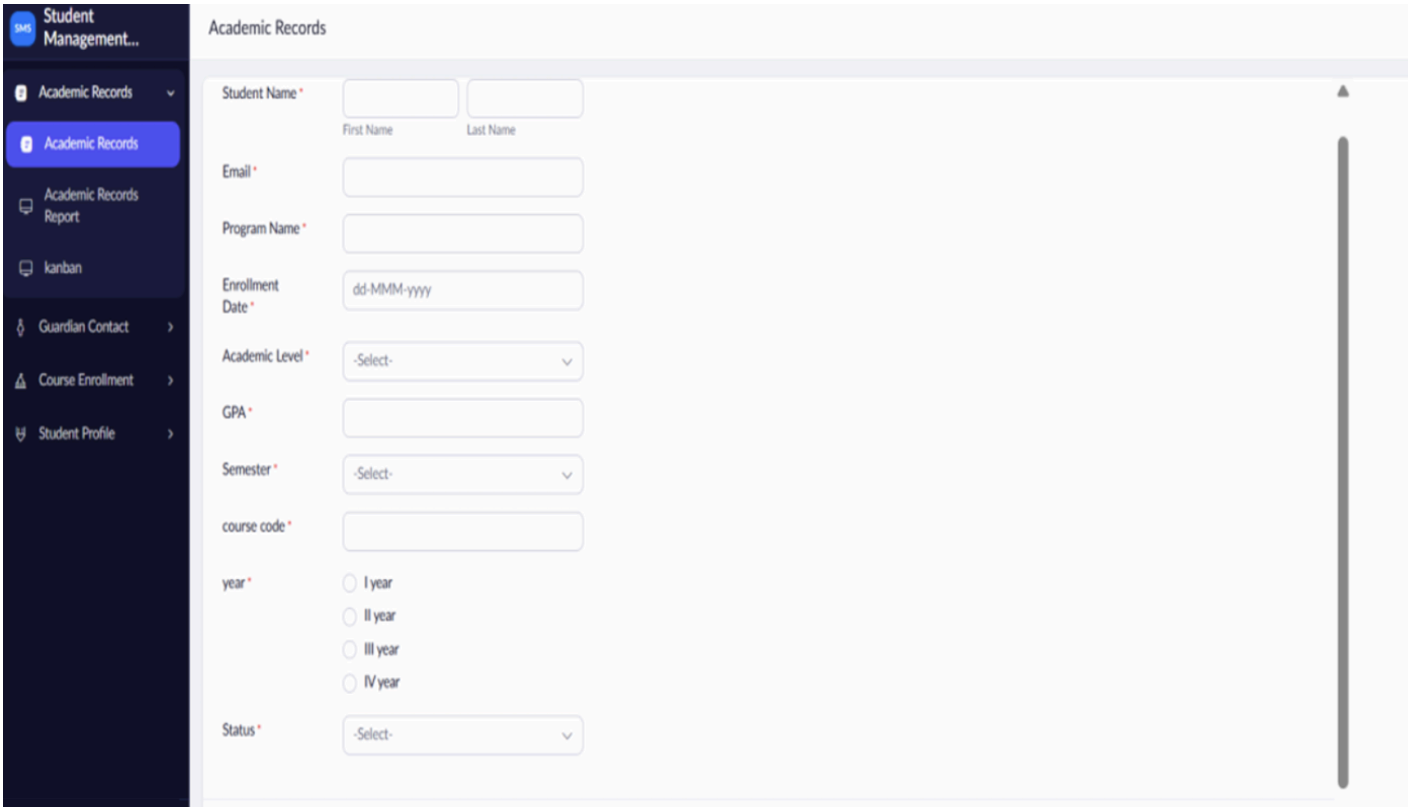

Figure 2: Zoho Creator preview of the Student Management form.

6. Advantages and Limitations

Advantages

• Visual and simple form-building process.

• Reduces development time for basic applications.

• Different field types can be configured without extensive coding.

• Mandatory fields and basic validation can be applied easily.

Limitations

• More complex customization may require Deluge scripting.

• Application design is dependent on the features available on the platform.

7. Result

Thus, a simple Student Management form was successfully designed and previewed in Zoho Creator. The experiment helped in understanding how different field types and basic form settings can be used to collect and organize student information with reduced coding effort.
