CB23F35: Low-Code Application Development using Zoho Creator

EX. 9: Blueprint in Zoho Creator

1. AIM

To design a Blueprint in Zoho Creator for an Appointment Scheduling form, defining the stages and transitions that guide an appointment from creation through confirmation, check-in, consultation, cancellation, or no-show.

2. THEORY

Blueprint: A Blueprint is a visual process-design feature in Zoho Creator that guides records through a defined sequence of stages. It helps users follow a consistent procedure and prevents records from moving forward without using the configured transitions.

- **Stages:** These represent the different states of a record, such as Appointment Scheduled or Consultation Completed.
- **Transitions:** These are actions that move a record from one stage to another, for example Confirm Appointment or Start Consultation.
- **Transition settings:** The Before section can define who may perform a transition and when it is available. During can collect required information, while After can perform follow-up actions.
- **Blueprint execution:** A Blueprint can be applied to every submitted record or only to records meeting a specified condition.
- **Benefits:** Blueprints standardize processes, clarify responsibilities, reduce skipped steps, and support automated actions.

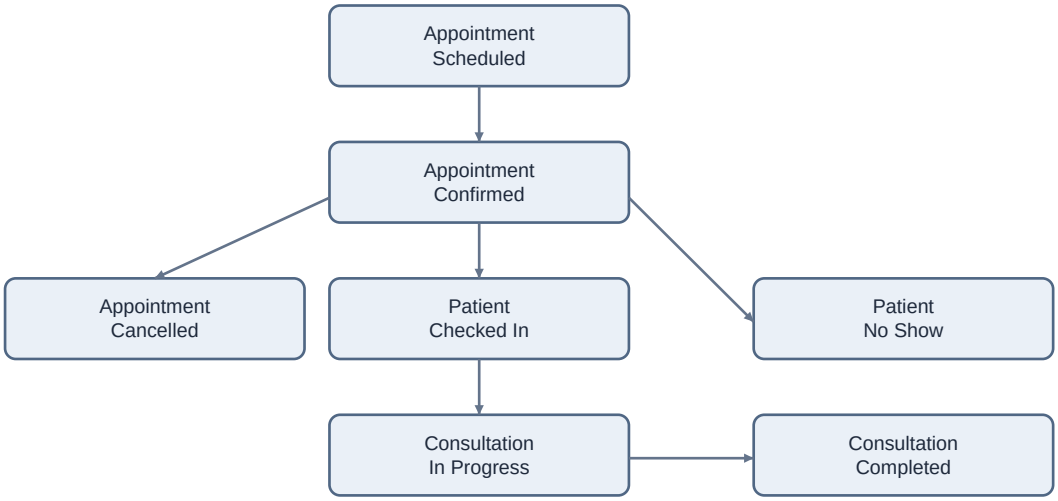
3. PROCEDURE

- Log in to Zoho Creator and open the application that contains the Appointment Scheduling form.
- Open Workflow, navigate to Blueprints, and select New Blueprint.
- Choose the Appointment Scheduling form and enter the Blueprint name as Appointment Management Blueprint.
- Select Always, if the Blueprint should apply to every submitted record, and create the Blueprint.
- Add the stages: Appointment Scheduled, Appointment Confirmed, Appointment Cancelled, Patient Checked In, Consultation In Progress, Consultation Completed, and Patient No Show.
- Connect the Start point to Appointment Scheduled.
- Create transitions between the appropriate stages using the transition names listed in the next section.
- Configure transition owners, criteria, and any required Before, During, and After actions.
- Save the Blueprint and select Done to finish the configuration.
- Open the Blueprints list and verify that the Blueprint is enabled for the selected form.

4. STAGES AND TRANSITIONS

Transition	From stage	To stage
Confirm Appointment	Appointment Scheduled	Appointment Confirmed
Cancel Appointment	Scheduled / Confirmed	Appointment Cancelled
Check In Patient	Appointment Confirmed	Patient Checked In
Mark Patient No Show	Appointment Confirmed	Patient No Show
Start Consultation	Patient Checked In	Consultation In Progress
Complete Consultation	Consultation In Progress	Consultation Completed

5. BLUEPRINT FLOW



Illustrative process flow for the Appointment Management Blueprint

The diagram above is an illustrative process flow for the report. Replace or supplement it with screenshots of your actual Blueprint configuration in Zoho Creator for practical submission.

6. TRANSITION CONFIGURATION

Each transition can be configured according to the application requirements. For example, the Confirm Appointment transition can be made available to authorized users. During the transition, relevant appointment details may be reviewed or entered. After confirmation, a notification can be sent to the patient or responsible staff member if the application has been configured for that action.

7. APPLICATION

In a clinic management application, the Appointment Management Blueprint standardizes the appointment lifecycle. A new appointment begins in the Appointment Scheduled stage. It can then be confirmed or cancelled. Confirmed patients may be checked in, marked as no-show, and moved into consultation. Once the consultation is finished, the record reaches Consultation Completed.

8. OUTPUT

The expected output is a saved Blueprint with the defined stages and transitions connected in the Blueprint builder. Evidence for the practical record can include the Blueprint creation page, the stage layout, transition configuration, the complete flow, and the enabled Blueprint shown in the Blueprints list.

9. RESULT

Thus, the Appointment Management Blueprint was designed for the Appointment Scheduling form in Zoho Creator. The stages and transitions define a consistent appointment process covering confirmation, cancellation, check-in, consultation completion, and no-show handling.
