CB23F35: Low-Code Application Development using Zoho Creator

EX. 10: Schedule Requirements in Zoho Creator (Daily, Weekly, Monthly)

1. AIM

To configure a schedule in Zoho Creator that automatically sends a medical-record follow-up reminder and to understand how scheduled workflows can run daily, weekly, or monthly.

2. THEORY

A schedule in Zoho Creator is a workflow that executes automatically at a configured time, without requiring a user to open a form or click a button. Schedules can be used for reminders, periodic reports, status updates, and routine record maintenance. A schedule defines when an action runs and what action is performed, such as sending an email, displaying a notification, or executing a Deluge script.

A schedule may be based on a date stored in a record or may repeat at a selected frequency. The common schedule frequencies are:

Frequency	When it runs	Example use
Daily	Every day at the selected time.	Daily appointment reminders.
Weekly	On selected day(s) each week.	Weekly summary email to a manager.
Monthly	On a selected date each month.	Monthly billing or follow-up reminders.

A schedule can be enabled or disabled using its status control. In this experiment, a schedule named **Medical Record Follow-up Reminder** is associated with the Medical Records form and sends a reminder email to the administrator.

3. PROCEDURE

- Sign in to Zoho Creator, open the required application, and select the Workflow tab.
- Open Schedules and select New Workflow.
- Enter the schedule name as Medical Record Follow-up Reminder and choose the Medical Records form.
- Select a record-date schedule, or configure a recurring schedule by choosing Daily, Weekly, or Monthly and specifying the required date or time settings.
- In the workflow builder, select Add New Action and choose Send Mail.
- Configure the sender and recipient using the appropriate available email settings, and enter the subject as Medical Record Follow-up Reminder.
- Write a brief message asking the responsible staff member to review the medical record, diagnosis, treatment plan, and prescription.
- Save the email action, click Done, and verify the schedule settings and status.
- When the schedule runs, check the configured mailbox to confirm whether the reminder email was delivered.

4. SCHEDULE FREQUENCIES AND USES

Type	Configuration	Use in an application
Daily	Set the execution time for each day.	Remind staff about records requiring follow-up.
Weekly	Choose the day(s) and time of the week.	Send a weekly list of pending medical-record reviews.
Monthly	Choose the date and time each month.	Send a monthly review or activity summary.

5. SAMPLE EMAIL CONTENT

Subject: Medical Record Follow-up Reminder

Dear Doctor,

This is a reminder to review the medical record and any pending follow-up requirements. Please check the diagnosis, treatment plan, and prescription details, and take the necessary action.

Thank you,
Clinic Management System

6. APPLICATION

In a clinic management application, scheduled workflows can remind the responsible staff to review medical records and follow-up requirements. A daily schedule may support routine checks, a weekly schedule may summarize pending reviews, and a monthly schedule may provide a periodic overview. The exact action depends on the schedule configuration.

7. OUTPUT

The expected output is a saved schedule associated with the selected form and configured to send an email action. Evidence for the practical record may include the Schedules page, schedule builder, email action settings, message body, and the received reminder email. Add screenshots from your own Zoho Creator application to show the actual execution.

8. RESULT

Thus, the schedule configuration in Zoho Creator was documented for sending a medical-record follow-up reminder. The experiment illustrates how daily, weekly, and monthly schedules can automate routine reminders and follow-up activities.
